

Claims Denial Analysis Report

Executive Overview

Total Denials Analyzed

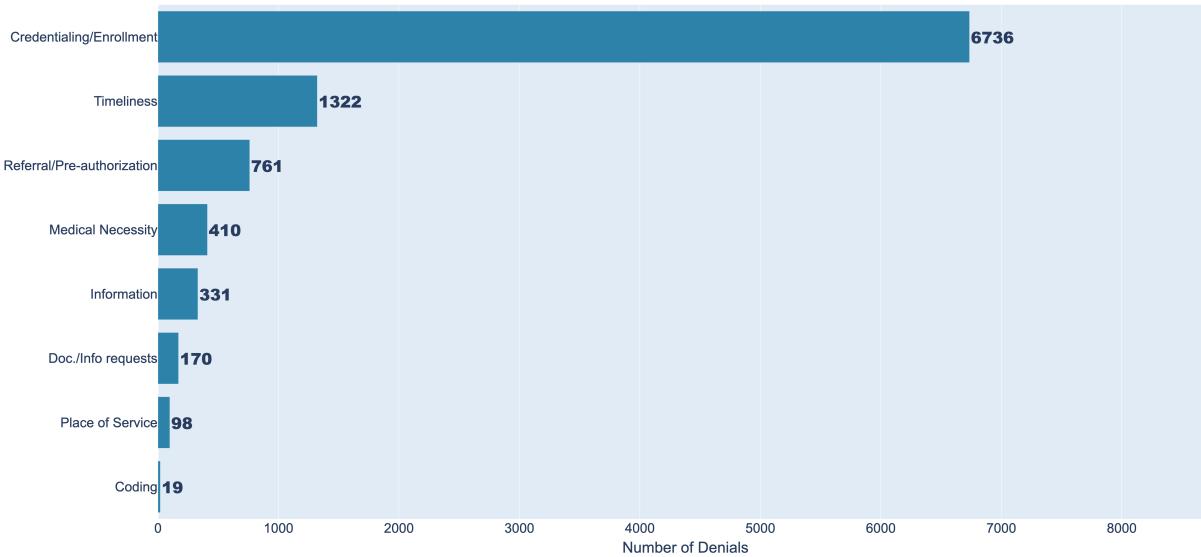

9,847

Unique Denial Categories

8

Scope: This analysis excludes Coverage, Paid to Patient, Bundling, Coordination of Benefits, Eligibility, Duplicate, and Recoupment/Refund categories to focus on operational denial reasons.

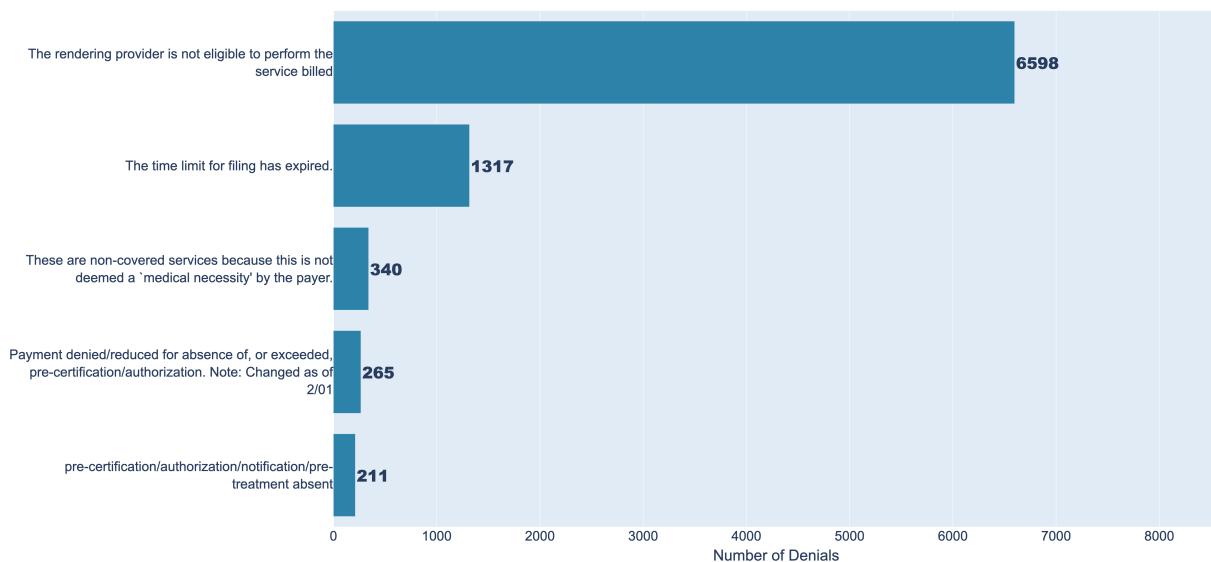

Denial Category Distribution

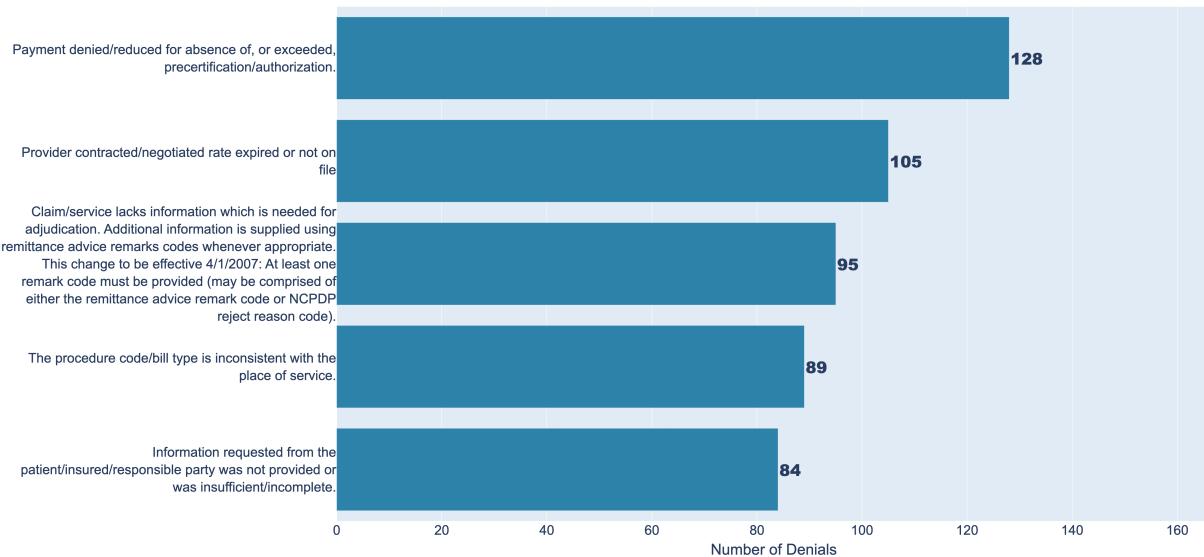

Key Finding: Credentialing/Enrollment represents the largest category at 68.4% of all denials (6,736 denials), followed by Timeliness at 13.4% (1,322 denials).

Top 20 Denial Reasons

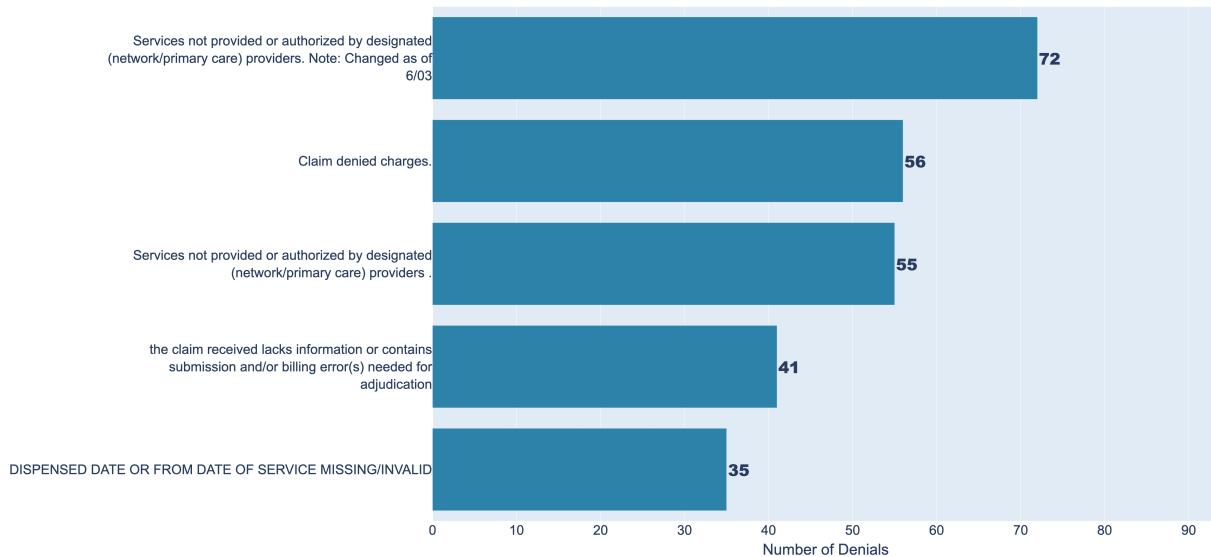

Denial Reasons #1-5

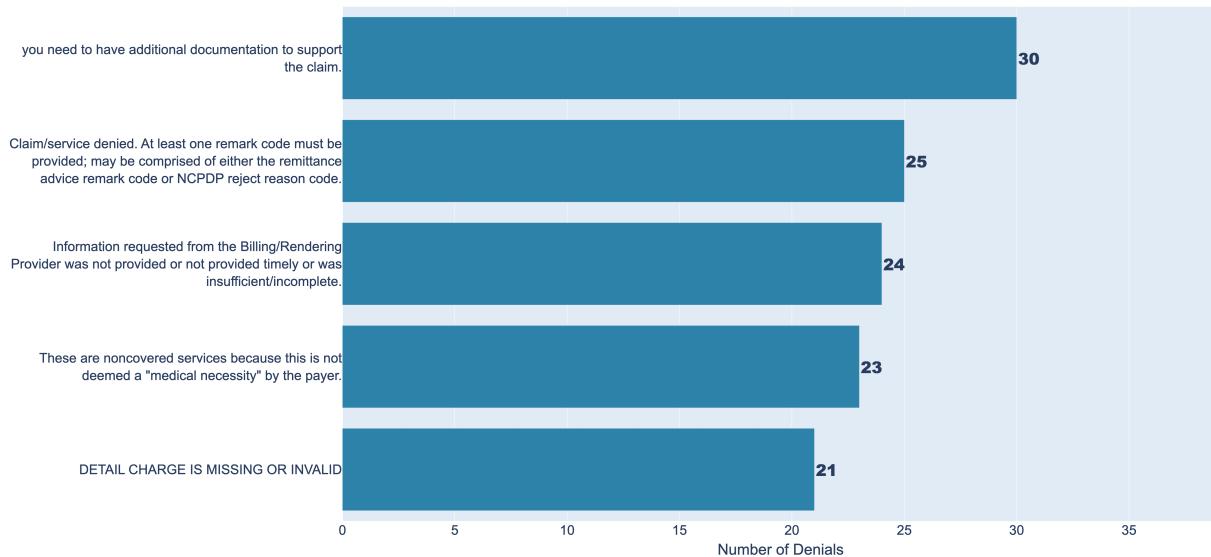

Denial Reasons #6-10

Denial Reasons #11-15

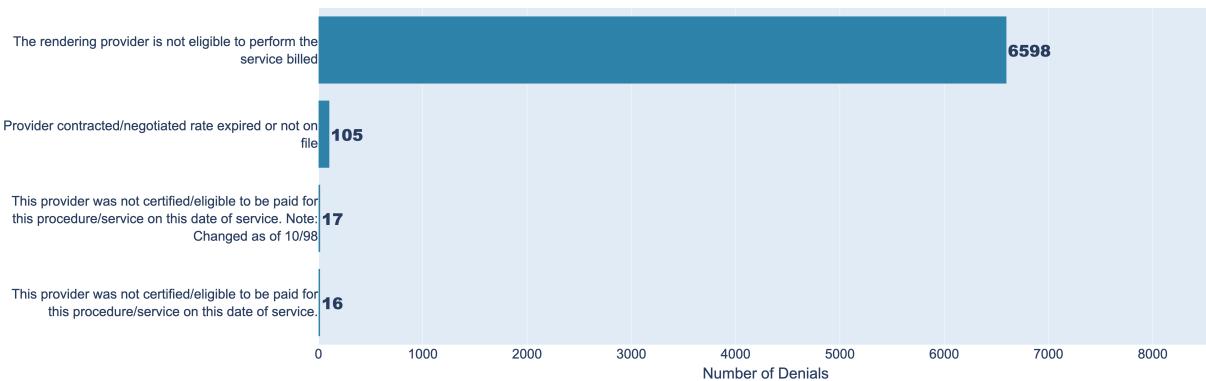

Denial Reasons #16-20

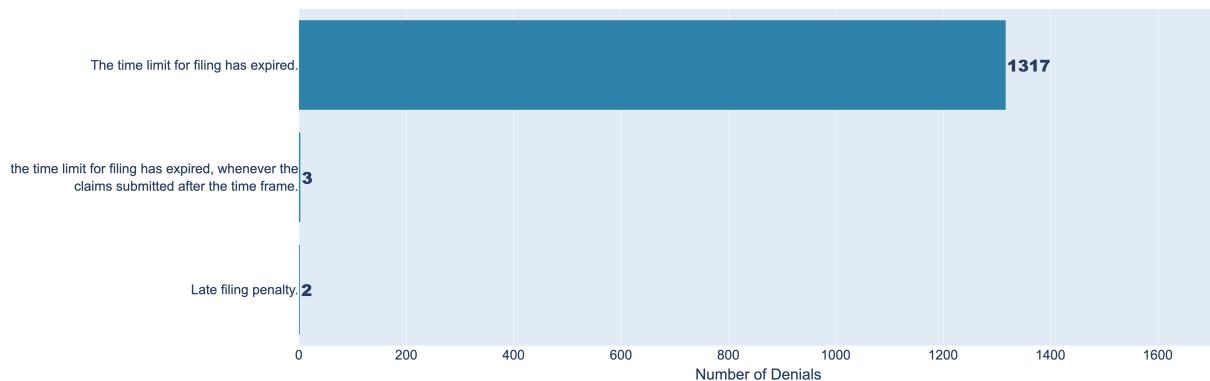

Category Breakdown

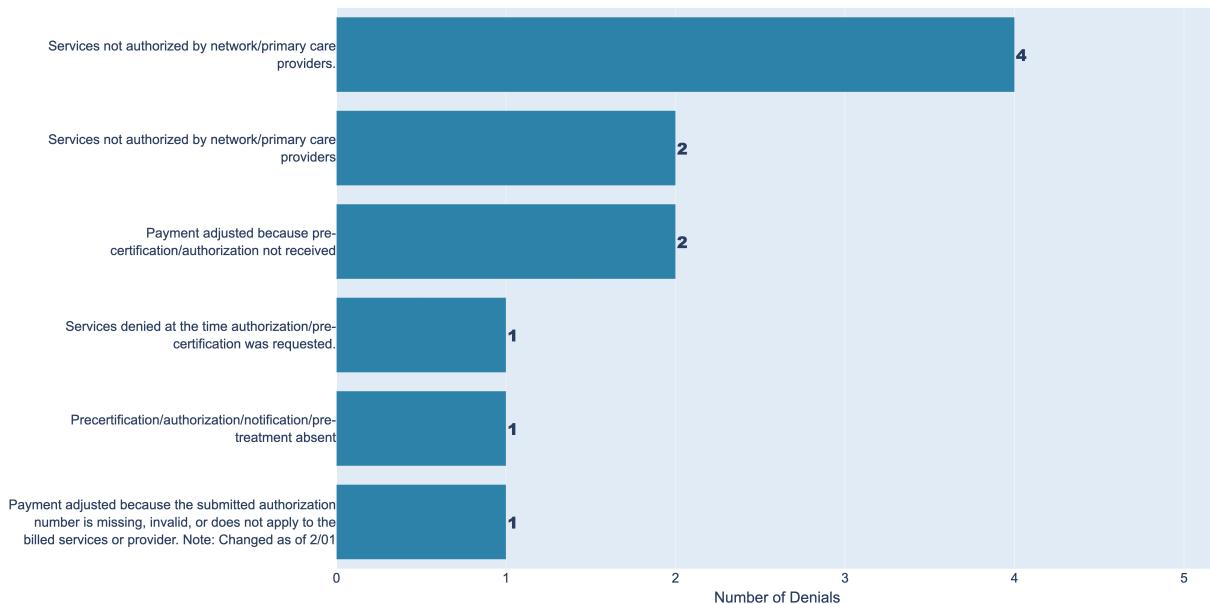

1. Credentialing/Enrollment (6,736 denials - 68.4%)

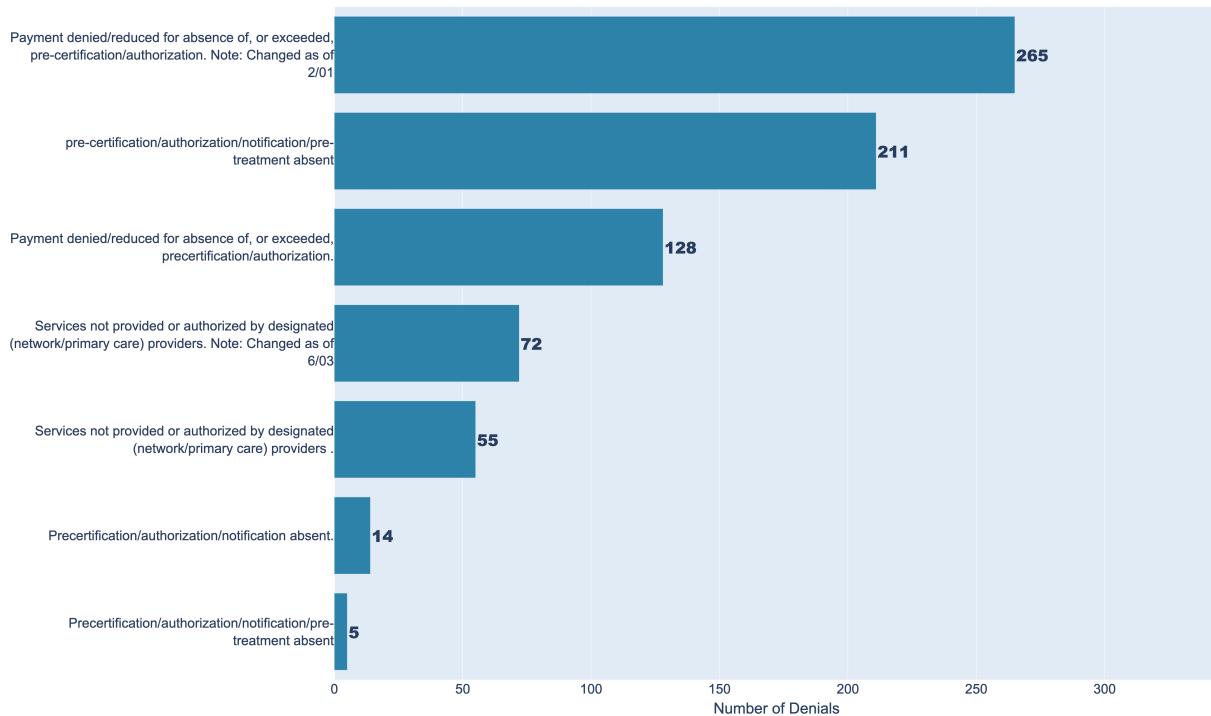

2. Timeliness (1,322 denials - 13.4%)

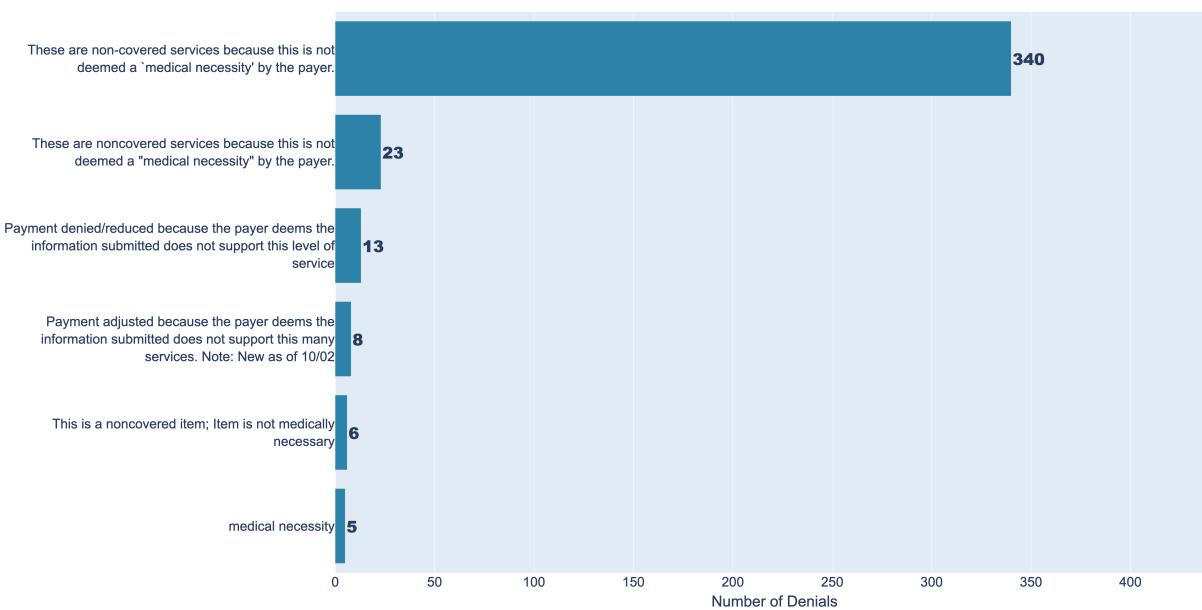

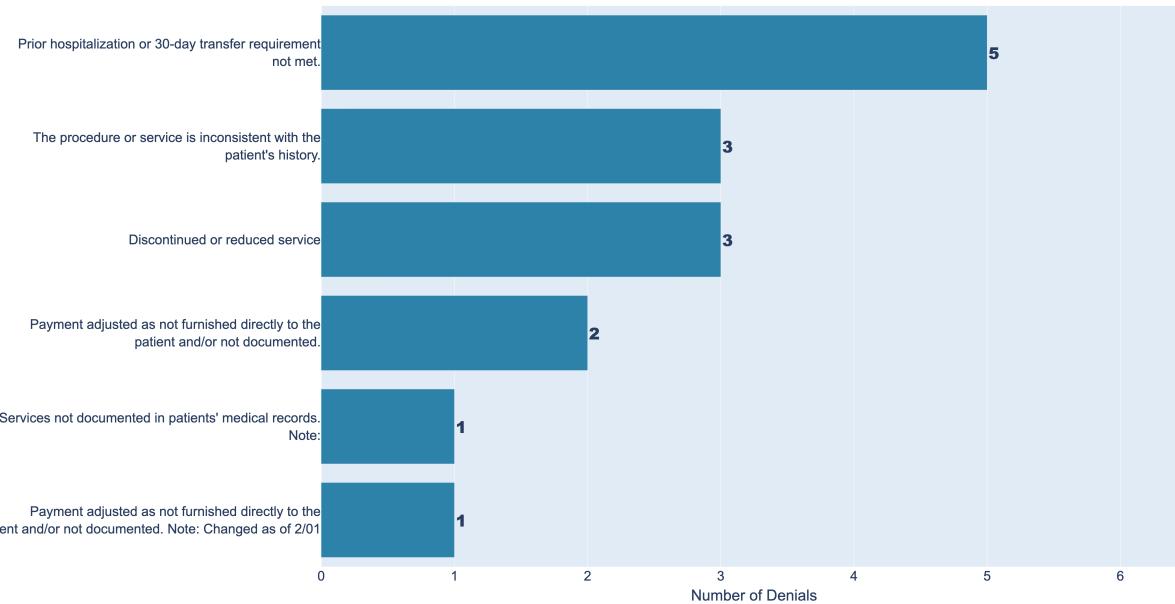

3. Referral/Pre-authorization (761 denials - 7.7%)

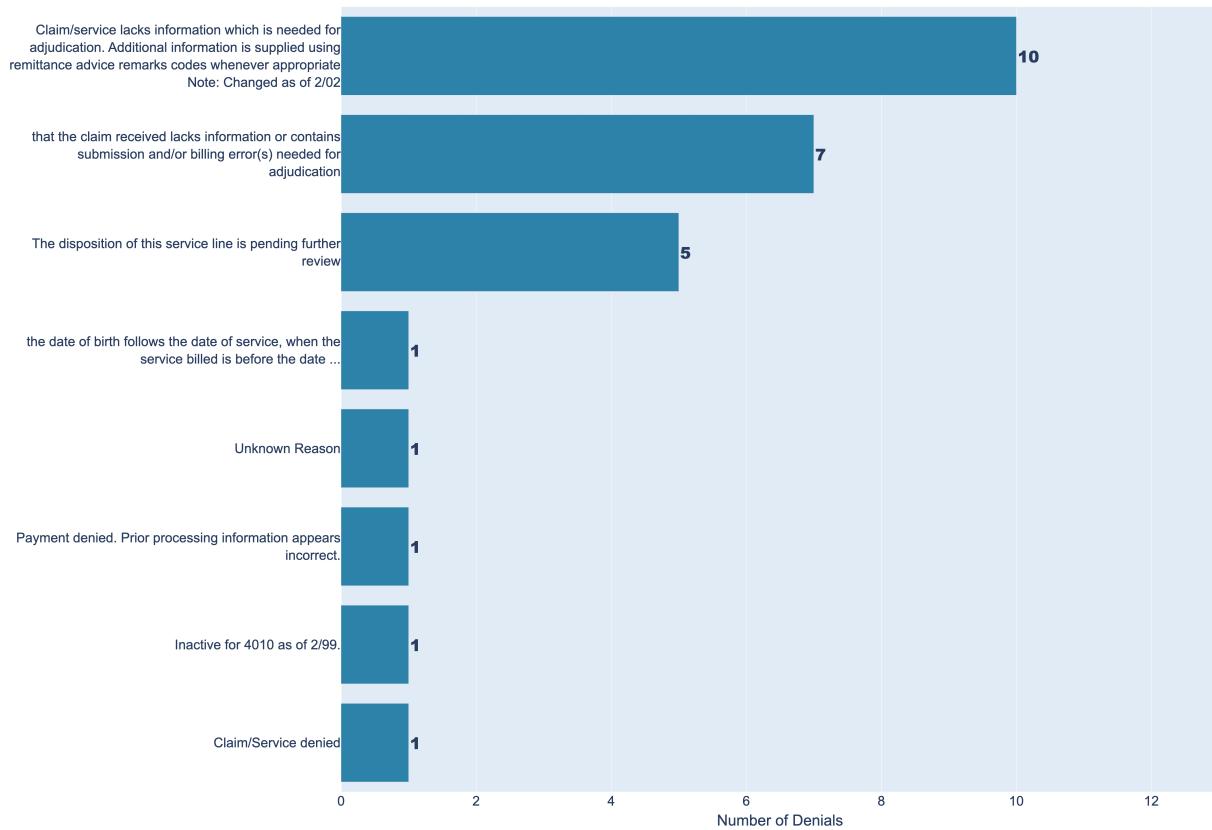

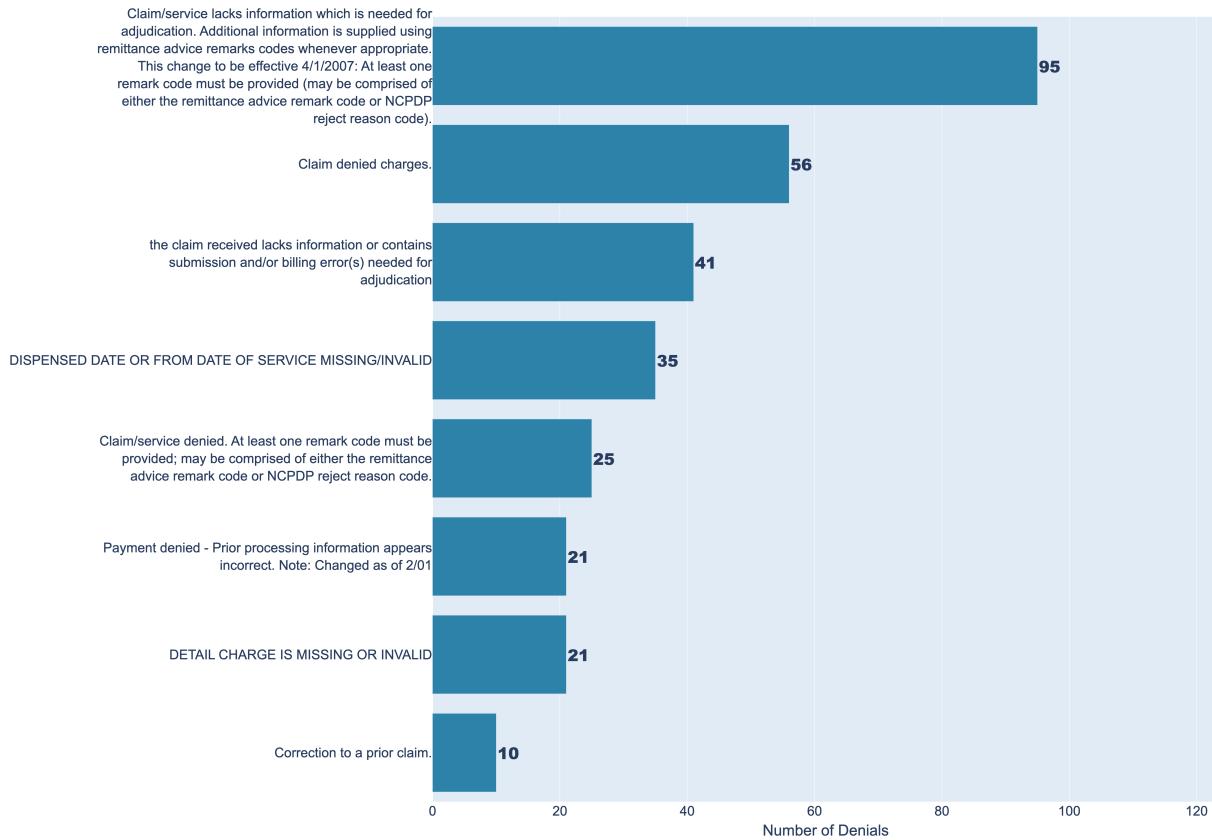

4. Medical Necessity (410 denials - 4.2%)

5. Information (331 denials - 3.4%)

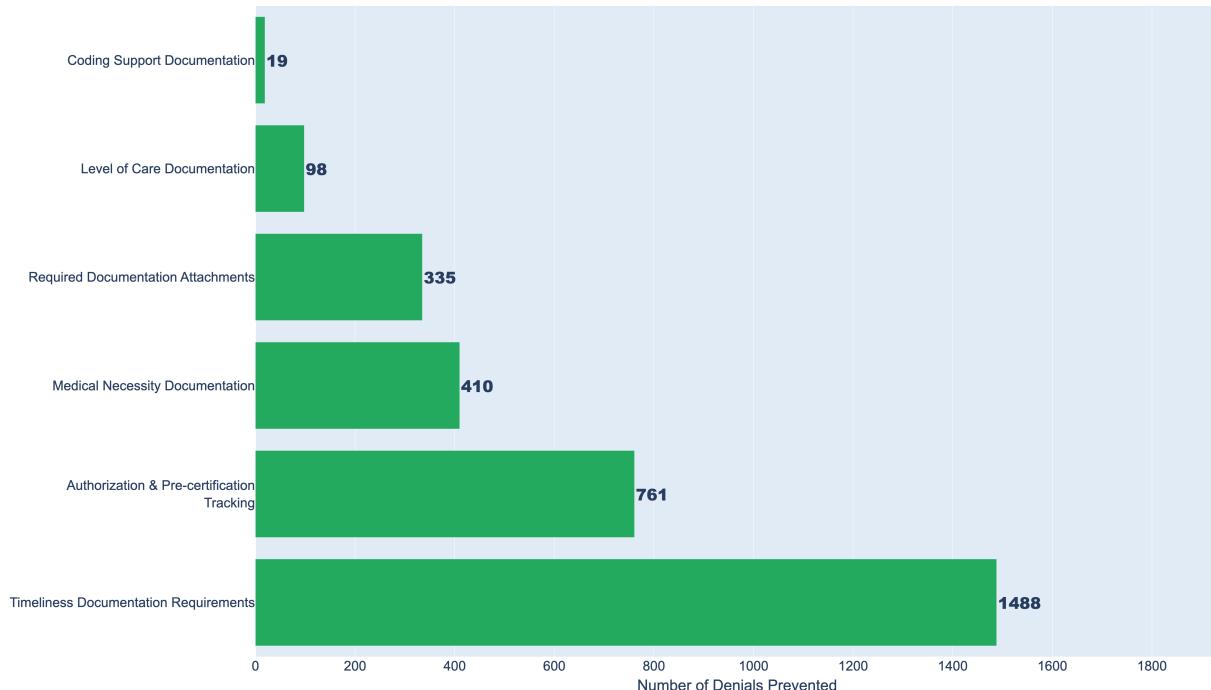

Prevention Impact Analysis

This section analyzes how the chart audit system would prevent denials by ensuring documentation completeness and compliance at the point of care.

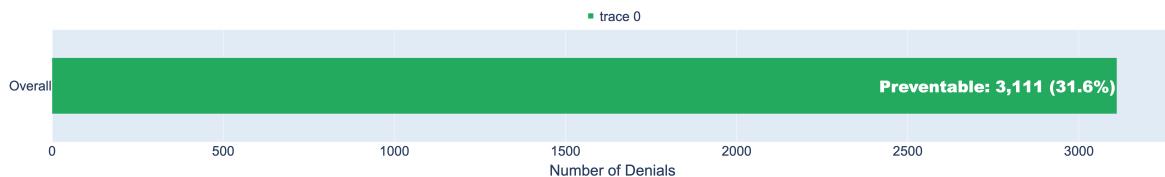

Impact Summary by Audit Area

Audit Area	Denials Prevented	Number of Audit Criteria	Categories Impacted
Timeliness Documentation Requirements	1,488	9	Timeliness (1,322), Information (166)
Authorization & Pre-certification Tracking	761	4	Referral/Pre-authorization (761)
Medical Necessity Documentation	410	8	Medical Necessity (410)
Required Documentation Attachments	335	7	Doc./Info requests (170), Information (165)
Level of Care Documentation	98	3	Place of Service (98)
Coding Support Documentation	19	3	Coding (19)

Prevention Impact by Audit Area

Overall Prevention Coverage

Summary: The chart audit system can prevent **3,111 denials (31.6%)** through documentation completeness checks. The largest impact comes from timeliness requirements (1,488 denials prevented) and authorization tracking (761 denials prevented).

Note on Credentialing/Enrollment (6,736 denials): This category is marked as "Unclear" in prevention analysis. While chart audits may catch some credentialing issues indirectly (e.g., verifying provider information), these denials are primarily administrative and may require separate credentialing verification processes beyond clinical chart audits.
